

# OUR LINE OF PRODUCTS

## Performance and Precision

We are proud to design and manufacture quality products at the cutting edge of technology. The robustness, reliability and accuracy of our solutions have allowed us to keep the leading position in the fleet management systems' market for 17 years.

### ASTUS TAG THE COMPLETE SOLUTION

Our main product, the Astus Tag module, is an electronic box which records its position by GPS at specified intervals or on change of position, as well as other data like speed and distance traveled. The information is transmitted through the cellular network and can be viewed and analyzed with our Astus software.

The module provides data on the vehicle's accessories, such as doors or hood and can also be combined with other peripherals (available as options, see below) to diversify its uses.

### ASTUS GARMIN BE EFFICIENT, CLEAR AND PRECISE

Coupled with the Astus Tag module, the Garmin navigation screen becomes a multi-purpose messaging tool. Unique features are added to the basic GPS functions: real-time communication between the manager and the drivers, task-dispatching, route planning with estimated time of arrival.

The models we propose have free lifetime map updates in North America included.

### ASTUS TK ABSOLUTE CONTROL OVER TEMPERATURE

Astus Tag is interfaced with the ThermoKing refrigeration system to control the temperature during transport, as well as details including reefer status and engine codes.

The module can also generate alerts when temperatures reach a certain limit or when other anomalies are detected.

### ASTUS ID ACCESS CONTROL AND MANAGEMENT OF VEHICLE USE

When the Astus Tag module is combined with our RFID antenna, it makes it possible to manage driver identification and control access to the use of fleet vehicles.

The manager is able to associate data to an employee instead of a vehicle, which is especially useful for companies where many drivers share the vehicles.

If your company already uses a RFID access control system, you will most likely be able to use your existing cards.

# MOBILE PRODUCTS

## The Flexibility of a Custom Solution

We also make modules that can remain independent of the vehicles. These products are ideal for representatives, trailers or rental cars.

### ASTUS METAL THE PERFECT TOOL FOR ASSET TRACKING

This small module, which is battery powered, is ideal for tracking cargo and equipment.

Since it doesn't use GPS – only cellular towers – the life of the battery is highly extended and it can transmit its position even from inside refrigerated trucks, metal containers or buildings.

### ASTUS FLEX FOR MAXIMUM FLEXIBILITY

Cousin of Astus Metal, this module is in some way a mix between it and the Astus Tag. It offers the same features as the Tag, while having the distinction of being mobile, so to operate independently on battery.

The Astus Flex comes with a choice of options: permanent installation or standalone (with battery), rechargeable in a wall or plugged into the cigarette lighter.

### ASTUS PICO FROM SIMPLE PHONE TO GPS LOGGER

Our software turns BlackBerry smartphones into tracking modules. No need for a separate electronic box, and the system can track people instead of following only one vehicle. This option is particularly interesting for companies that don't own any vehicles.

Especially useful for lone workers, it includes a LWP (lone worker protection) feature and a panic button to automatically send an alarm.

## Other Noteworthy Products

We offer complete and flexible fleet management solutions, so feel free to inquire about how our products can meet your specific needs!

### ASTUS SOFTWARE

WINDOWS, WEB OR SMARTPHONE SOLUTION

Astus software allow you to perform all tasks related to fleet management: see your vehicles in real time on a map, generate analysis reports, communicate with your drivers and see the history of their travels.

### WEB AND PUSH SERVICES

DOCK ASTUS WITH YOUR EXISTING SYSTEMS

Our server software enable data exchange between Astus and your existing systems, such as a payroll system. Find out about the different options available: they could make your work much more enjoyable!
